HighlightIQ™ – Monroe's Motivated Sequence Speech Script

Target Time: 4–5 minutes | Deliver naturally, don't read word for word

---

ATTENTION

(Hold up your textbook. Flip through it slowly so the audience can see highlights scattered everywhere. Then look up.)

"You've been here before.

It's the night before an exam. You open your textbook, and you see all your highlights — yellow, pink, green, pages covered. And for a second you think, 'Okay. I'm prepared. I did the work.'

But then you actually sit down to study from those highlights.

And you realize… they're just random sentences. Scattered across 200 pages. No organization. No connection. No context.

You highlighted everything that seemed important — but now none of it actually makes sense together.

(pause, look directly at camera)

So let me ask you something. What's the point of highlighting if it doesn't actually help you study?"

NEED

(Set the textbook down. Speak directly to camera.)

"Here's the problem. Highlighting is something every single student does. But nobody talks about how broken it actually is as a study strategy.

First — your highlights are scattered. You highlighted something about cellular respiration on page 47, something else on page 89, and something else on page 134. They're all connected — but your textbook doesn't show you that. So you're memorizing fragments instead of actually understanding the concept.

Second — most of us are highlighting across multiple sources. Your textbook, your lecture handouts, printed slides. All highlighted separately. All sitting in different places. There's no way to combine them into one place, so critical information stays buried.

Third — old highlights become impossible to find. You know you highlighted something important about mitochondria three weeks ago. But which book? Which page? You spend more time *searching* for your highlights than actually studying from them.

And fourth — this is the big one — highlighting identifies information but it doesn't help you *understand* it. You can recognize a highlighted definition on an exam and still have no idea how to apply it. Because highlighting never taught you how the concepts connect.

(pause)

We've all been told 'highlight the important stuff.' But nobody ever told us what to do with it after."

SATISFACTION

(Hold up the HighlightIQ highlighter.)

"Until now.

Introducing **HighlightIQ** — the world's first AI-powered smart highlighter that turns every single highlight you make into an organized, searchable, connected study guide.

(Hold it up closer to camera)

It looks exactly like a regular highlighter. Same size. Same feel. You use it the exact same way. But inside is a Bluetooth sensor that captures every highlight in real time and syncs it to the HighlightIQ app on your phone.

And here's where it gets good.

The app uses AI to automatically group your highlights by topic. Everything you've ever highlighted about mitochondria — from every source, every textbook, every handout — gets pulled together in one place. Organized. Searchable. Connected.

(pull out phone and briefly show app)

It also builds concept maps — so you can actually *see* how ideas relate to each other. Mitochondria connects to ATP, connects to cellular respiration, connects to energy production. You're not just memorizing definitions anymore. You're understanding systems.

And it automatically generates flashcards from your highlights. Not just recall flashcards — comprehension flashcards. 'Why does the mitochondria matter? How does it connect to cellular function?' That's the level of understanding that gets you the grade.

You highlight exactly like you always have. HighlightIQ does the rest."

VISUALIZATION

(Slow down. Be intentional here. Shift tone.)

"Let me paint two pictures for you.

Picture one — no HighlightIQ.

It's the night before your biology midterm. You open your textbook. Scattered highlights everywhere. You start flipping pages — page 47, page 89, page 134 — trying to piece together cellular energy in your head. An hour in, you're frustrated. You don't have a study guide. You have a highlighted textbook. So you start re-reading entire chapters just to get the context you missed.

Two hours later, you're exhausted. You're not confident. You go to bed stressed, hoping you retained *something*.

(pause. shift tone to calm and positive)

Now picture two — with HighlightIQ.

Same night before the same exam. You open the HighlightIQ app. You search 'cellular energy.' Instantly — every highlight you've ever made on that topic is right there. Organized by concept. Connected by relationship. Clean study guide, already built.

You spend 45 minutes reviewing. You're not flipping through 200 pages. You're not re-reading chapters. You're *learning* — because your highlights finally make sense together.

You close your phone. You feel ready. You go into that exam confident.

(look directly at camera)

Same highlights. Completely different outcome. That's HighlightIQ."

ACTION

(Energy up. Conversational but persuasive.)

"So here's what you need to know.

A single HighlightIQ smart highlighter is **$24.99**. That's less than most people spend on lunch in a week. The companion app is **$59.99 a year** — cheaper than any streaming subscription you're probably already paying for.

Right now, go to **HighlightIQ.com** and use code **STUDYSMART** for 25% off your first highlighter. You also get a **30-day free trial** of the full premium app — no credit card required. And if you don't love it? Full refund. No questions.

You can also find HighlightIQ on Amazon, and in stores at Target, Staples, and Barnes & Noble.

(hold up highlighter one more time)

Look — you're going to highlight anyway. That's not changing. The only question is whether those highlights are going to just sit there on the page, or whether they're going to actually *work* for you.

HighlightIQ makes them work.

Visit **HighlightIQ.com**. Code: **STUDYSMART**.

Your highlights, organized. Your studying, efficient.

Let's go."

DELIVERY NOTES

Pacing:

- ATTENTION: medium pace, let the relatable moment breathe
- NEED: slightly faster, punchy — drive home each problem
- SATISFACTION: confident and clear, slow down on key features
- VISUALIZATION: slowest section — let both pictures fully land
- ACTION: energy up, direct, conviction

Nonverbals:

- ATTENTION: hold up the textbook, flip through it, then set it down
- NEED: use fingers to count each need (1st, 2nd, 3rd, 4th)
- SATISFACTION: hold up highlighter prominently, pull out phone for app demo
- VISUALIZATION: minimal movement — stillness adds weight to this section
- ACTION: hold up highlighter again at the end, make direct eye contact with camera

Eye Contact:

- Speak TO the camera, not at notes
- Glance at highlighter/phone only when demonstrating
- Direct eye contact during VISUALIZATION and ACTION is critical

Voice:

- Vary your tone — frustrated during NEED, calm during SATISFACTION, emotional contrast in VISUALIZATION, high energy in ACTION
- Pause intentionally — especially after "What's the point of highlighting if it doesn't actually help you study?" and before each visualization

Time Check:

- ATTENTION: ~45 seconds
- NEED: ~60 seconds
- SATISFACTION: ~75 seconds
- VISUALIZATION: ~75 seconds
- ACTION: ~45 seconds
- Total: ~5 minutes
